

# State control of construction works and commissioning of buildings

Published: 18.09.2020.

Within the framework of state control of construction work inspectors:

verify the conformity of construction works with the requirements of regulatory enactments;

verify the conformity of construction works with the design and the requirements of regulatory enactments;

checks the existence of conformity assessment documentation of construction products in the construction site and informs the authority responsible for market surveillance of construction products in case of nonconformities found;

verifies compliance with environmental protection requirements in the construction site and informs the authority responsible for environmental state control in case of any nonconformities found;

checks provision of the author supervision or supervision of construction in cases determined by the regulatory enactments and compliance with the construction supervision plan.
